Abstract

The general concept of the Internet and the flexibility of technology have contributed a growth of the online education and learning. This study investigates what challenges that the students have encountered from their online learning classes. Quantitative-descriptive research design was used in this study using a survey questionnaire to gather data to evaluate the common challenges that students have encountered in online learning. The respondents were the 154 students of BS Cruise Ship Management of JBLFMU. The general result of this study revealed that students have experienced technical difficulties as the primary challenge in online learning classes.
