CONTENTS

Symbols	xvii
1 Introduction and Preliminaries	1
1.1 A Thermodynamic System and the Control Volume	4
1.2 Macroscopic Versus Microscopic Points of View	5
1.3 Properties and State of a Substance	6
1.4 Processes and Cycles	7
1.5 Units for Mass, Length, Time, and Force	8
1.6 Specific Volume and Density	10
1.7 Pressure	13
1.8 Energy	20
1.9 Equality of Temperature	22
1.10 The Zeroth Law of Thermodynamics	22
1.11 Temperature Scales	23
1.12 Engineering Applications	24
2 Properties of a Pure Substance	35
2.1 The Pure Substance	36
2.2 The Phase Boundaries	36
2.3 The P - v - T Surface	42
2.4 Tables of Thermodynamic Properties	45
2.5 The Two-Phase States	47
2.6 The Liquid and Solid States	49
2.7 The Superheated Vapor States	50
2.8 The Ideal Gas States	53
2.9 The Compressibility Factor	56
2.10 Equations of State	60
2.11 Engineering Applications	61
3 Energy Equation and First Law of Thermodynamics	70
3.1 The Energy Equation	70
3.2 The First Law of Thermodynamics	74
3.3 The Definition of Work	75
3.4 Work Done at the Moving Boundary of a Simple Compressible System	80
3.5 Definition of Heat	88

3.6	Heat Transfer Modes	89
3.7	Internal Energy—A Thermodynamic Property	91
3.8	Problem Analysis and Solution Technique	93
3.9	The Thermodynamic Property Enthalpy	98
3.10	The Constant-Volume and Constant-Pressure Specific Heats	100
3.11	The Internal Energy, Enthalpy, and Specific Heat of Ideal Gases	102
3.12	Nonuniform Distribution of States and Mass	108
3.13	The Transient Heat Transfer Process	109
3.14	Engineering Applications	111
4	Energy Analysis for a Control Volume	134
4.1	Conservation of Mass and the Control Volume	134
4.2	The Energy Equation for a Control Volume	137
4.3	The Steady-State Process	140
4.4	Examples of Steady-State Processes	141
4.5	Multiple-flow Devices	152
4.6	The Transient Flow Process	154
4.7	Engineering Applications	159
5	The Second Law of Thermodynamics	175
5.1	Heat Engines, Refrigerators, and Heat Pump	175
5.2	The Second Law of Thermodynamics	182
5.3	The Reversible Process	186
5.4	Factors That Render Processes Irreversible	187
5.5	The Carnot Cycle	190
5.6	Two Propositions Regarding the Efficiency of a Carnot Cycle	192
5.7	The Thermodynamic Temperature Scale	193
5.8	The Ideal Gas Temperature Scale	194
5.9	Ideal Versus Real Machines	196
5.10	The Inequality of Clausius	200
5.11	Engineering Applications	204
6	Entropy	215
6.1	Entropy—A Property of a System	215
6.2	The Entropy of a Pure Substance	217
6.3	Entropy Change in Reversible Processes	219
6.4	The Thermodynamic Property Relation	224
6.5	Entropy Change of a Solid or Liquid	225
6.6	Entropy Change of an Ideal Gas	226
6.7	The Reversible Polytropic Process for an Ideal Gas	231
6.8	Entropy Change of a Control Mass During an Irreversible Process	235
6.9	Entropy Generation and the Entropy Equation	236
6.10	Principle of the Increase of Entropy	238
6.11	Entropy Balance Equation in a Rate Form	242
6.12	Some General Comments about Entropy and Chaos	246
7	Entropy Analysis for a Control Volume	260
7.1	The Entropy Balance Equation for a Control Volume	260
7.2	The Steady-State Process and the Transient Process	262

7.3	The Steady-State Single-Flow Process	269
7.4	Principle of the Increase of Entropy	273
7.5	Engineering Applications; Energy Conservation and Device Efficiency	277
8	Exergy	295
8.1	Exergy, Reversible Work, and Irreversibility	295
8.2	Exergy and Its Balance Equation	306
8.3	The Second Law Efficiency	311
8.4	Engineering Applications	316
9	Gas Power and Refrigeration Systems	325
9.1	Introduction to Power Systems	326
9.2	Air-Standard Power Cycles	327
9.3	The Stirling Cycle and the Ericsson Cycle	328
9.4	Reciprocating Engine Power Cycles	331
9.5	The Otto Cycle	333
9.6	The Diesel Cycle	336
9.7	The Dual Cycle	339
9.8	The Atkinson and Miller Cycles	341
9.9	The Brayton Cycle	344
9.10	The Simple Gas-Turbine Cycle with a Regenerator	350
9.11	Gas-Turbine Power Cycle Configurations	352
9.12	The Air-Standard Cycle for Jet Propulsion	356
9.13	Introduction to Refrigeration Systems	359
9.14	The Air-Standard Refrigeration Cycle	360
10	Vapor Power and Refrigeration Systems	375
10.1	The Simple Rankine Cycle	375
10.2	Effect of Pressure and Temperature on the Rankine Cycle	379
10.3	The Reheat Cycle	381
10.4	The Regenerative Cycle and Feedwater Heaters	383
10.5	Deviation of Actual Cycles from Ideal Cycles	388
10.6	Combined Heat and Power: Other Configurations	391
10.7	The Vapor-compression Refrigeration Cycle	394
10.8	Working Fluids for Vapor-compression Refrigeration Systems	396
10.9	Deviation of the Actual Vapor-compression Refrigeration Cycle from the Ideal Cycle	397
10.10	Refrigeration Cycle Configurations	399
10.11	The Absorption Refrigeration Cycle	401
10.12	Exergy Analysis of Cycles	403
10.13	Combined-cycle Power and Refrigeration Systems	405
11	Gas Mixtures	418
11.1	General Considerations and Mixtures of Ideal Gases	418
11.2	A Simplified Model of a Mixture Involving Gases and a Vapor	426
11.3	The Energy Equation Applied to Gas-Vapor Mixtures	430
11.4	The Adiabatic Saturation Process	432
11.5	Engineering Applications—Wet-Bulb and Dry-Bulb Temperatures and the Psychrometric Chart	434

12	Thermodynamic Relations	450
12.1	The Clapeyron Equation	450
12.2	Mathematical Relations for a Homogeneous Phase	453
12.3	The Maxwell Relations	455
12.4	Thermodynamic Relations Involving Enthalpy, Internal Energy, and Entropy	458
12.5	Volume Expansivity and Isothermal and Adiabatic Compressibility	464
12.6	Real-Gas Behavior and Equations of State	467
12.7	The Generalized Chart for Changes of Enthalpy at Constant Temperature	472
12.8	The Generalized Chart for Changes of Entropy at Constant Temperature	475
12.9	The Property Relation for Mixtures	478
12.10	Pseudopure Substance Models for Real Gas Mixtures	482
12.11	Engineering Applications	488
13	Chemical Reactions	499
13.1	Fuels	499
13.2	The Combustion Process	503
13.3	Enthalpy of Formation	509
13.4	Energy Analysis of Reacting Systems	512
13.5	Enthalpy and Internal Energy of Combustion; Heating Value	516
13.6	Adiabatic Flame Temperature	521
13.7	The Third Law of Thermodynamics and Absolute Entropy	523
13.8	Second-Law Analysis of Reacting Systems	524
13.9	Fuel Cells	529
13.10	Engineering Applications	533
14	Introduction to Phase and Chemical Equilibrium	545
14.1	Requirements for Equilibrium	545
14.2	Equilibrium Between Two Phases of a Pure Substance	547
14.3	Metastable Equilibrium	551
14.4	Chemical Equilibrium	553
14.5	Simultaneous Reactions	563
14.6	Coal Gasification	567
14.7	Ionization	568
14.8	Engineering Applications	570
15	Compressible Flow	578
15.1	Stagnation Properties	578
15.2	The Momentum Equation for a Control Volume	580
15.3	Adiabatic, One-Dimensional, Steady-State Flow of an Incompressible Fluid Through a Nozzle	583
15.4	Velocity of Sound in an Ideal Gas	585
15.5	Reversible, Adiabatic, One-Dimensional Flow of an Ideal Gas Through a Nozzle	587
15.6	Mass-Flow Rate of an Ideal Gas Through an Isentropic Nozzle	590
15.7	Normal Shock in an Ideal Gas Flowing Through a Nozzle	595
15.8	Nozzle and Diffuser Coefficients	601

Appendix A SI Units: Single-State Properties	611
Appendix B SI Units: Thermodynamic Tables	631
Appendix C Ideal Gas Specific Heat	681
C.1 Monatomic Gases (Inert Gases Ar, He, Ne, Xe, Kr; Also N, O, H, Cl, F, ...)	681
C.2 Diatomic and Linear Polyatomic Gases (N ₂ , O ₂ , CO, OH, ..., CO ₂ , N ₂ O, ...)	681
C.3 Nonlinear Polyatomic Molecules (H ₂ O, NH ₃ , CH ₄ , C ₂ H ₆ , ...)	682
Appendix D Equations of State	683
Appendix E Figures	688
Index	693

SYMBOLS

a	acceleration
A	area
a, A	specific Helmholtz function and total Helmholtz function
AF	air-fuel ratio
B_S	adiabatic bulk modulus
B_T	isothermal bulk modulus
c	velocity of sound
c	mass fraction
C_D	coefficient of discharge
C_p	constant-pressure specific heat
C_v	constant-volume specific heat
C_{p0}	zero-pressure constant-pressure specific heat
C_{v0}	zero-pressure constant-volume specific heat
COP	coefficient of performance
CR	compression ratio
e, E	specific energy and total energy
EMF	electromotive force, electrical potential, volt
ER	expansion ratio
f	fugacity, pseudo pressure
F	Faradays constant
F	force, also tension
FA	fuel-air ratio
g	acceleration due to gravity
g, G	specific Gibbs function and total Gibbs function
h, H	specific enthalpy and total enthalpy
HR, HP	enthalpy of reactants and enthalpy of products
HV	heating value
i	electrical current
i, I	specific and total irreversibility
k	conductivity
k	specific heat ratio: C_p/C_v
K	equilibrium constant
ke, KE	specific and total kinetic energy

FIGURE E.4 Psychrometric chart.

INDEX

A

Absolute entropy, 523–524
of substances, 629
Absolute temperature, 196, 201
Absolute temperature scale, 193
Absorption refrigeration cycle, 401–403
Accumulation, 135
Acentric factor, 684
Active flow devices and systems, control volume, 160–162
Actual cycles, deviation of, 388–391
Actual fuel–air ratio, 533
Actual heat engines, 199–200
Actual vapor–compression refrigeration cycle,
deviation of, 397–399
Adiabatic compressibility, 464–467
Adiabatic flame temperature, 521–523
Adiabatic flow, 583–584
Adiabatic process, 88
Adiabatic saturation process, 432–434
Adiabatic saturation temperature, 432
Air compressors, 25, 161
Air conditioner, 61, 198
Aircraft cooling, 361
Air–fuel ratio, 501, 506, 507
Air-standard cycle for jet propulsion, 356–359
Air-standard Diesel cycle, 336–339
Air-standard Otto cycle, 333–336
Air-standard power cycles, 327–328
Air-standard refrigeration cycle, 360–362
Alcohols, 501
Alternative energy systems, 279
Ammonia, 179
pressure–enthalpy diagram for, 690
Ammonia absorption refrigeration cycle, 402
Aneroid barometer, 27
Atkinson cycles, 341–344
Atmospheric nitrogen, 504
Atmospheric pressure, 17

Automotive engine intake throttle, 27
Automotive tire pressure gauges, 25
Avedoere Power Station, 2
Average velocity, 136

B

Balance equation, exergy and, 306–311
Ball valve, 160
Benedict–Webb–Rubin (BWR) equation, 471
Bernoulli, Daniel, 271
Bernoulli equation, 584
Biobutanol, 540
Blocks of copper, 22
Bore B, 331
Bottom dead center (BDC), 333
Brayton cycle, 344–350
Bridge expansion joint, 62
British thermal unit (Btu), 88
Bunsen burner, 4
Buoyancy effect, 63

C

Calorie (cal), 88
Capillary tube, 145
Carbon, 511
Carbon dioxide, phase diagram for, 41
Carnot cycle, 190–192
efficiency of, 192–193
on temperature–entropy diagram, 220
Carnot, Nicolas Leonard Sadi, 190
Cascade refrigeration system, 400
Celsius scale, 23, 24
Centigrade scale, 23
Centrifugal air compressor, 140, 161
Centrifugal (irrigation) pump, 161
Check valve, 160

- Chemical equilibrium, 7, 553–562
 coal gasification, 567–568
 engineering applications, 570–572
 equilibrium, requirements for, 545–547
 ionization, 568–570
 metastable equilibrium, 551–552
 pure substance, two phases of, 547–551
 simultaneous reactions, 563–567
- Chemical potential, 480
- Chemical reactions:
 adiabatic flame temperature, 521–523
 combustion process, 503–509
 engineering applications, 533–536
 enthalpy and internal energy of combustion, 516–521
 enthalpy of formation, 509–511
 fuel cells, 529–533
 fuels, 499–503
 reacting systems, energy analysis of, 512–516
 second-law analysis of reacting systems, 524–529
 third law of thermodynamics and absolute entropy, 523–524
- Chemical systems, 116
- Chlorofluorocarbons (CFCs), 396
- Clapeyron equation, 450–453, 549
- Clausius, inequality of, 200–203
- Clausius statement, 182–185
- Closed cycle, 325
- Coal gasification, phase and chemical equilibrium, 567–568
- Coefficient of performance (COP), 180, 181, 360
 vapor-compression refrigeration cycle, 395
- Cogeneration system, vapor power, 391–394
- Cold air properties, 328
- Collins helium liquefier, 361
- Combined Brayton/Rankine-cycle power system, 406
- Combined-cycle power and refrigeration systems, 405–407
- Combined heat and power (CHP), 114, 391–394
- Combustion, 533
- Combustion process, 561–562
 chemical reactions, 503–509
- Compound pressure gauge, 26
- Compressed air system, 162
- Compressed liquid, 38
- Compressed liquid water, 646–647
- Compressed-solid region, 45
- Compressibility chart, low-pressure region of, 468
- Compressibility factor, 56–60
- Compressible flow, 578
 control volume, momentum equation for, 580–582
 ideal gas, reversible, adiabatic, one-dimensional flow of, 587–590
 ideal gas, velocity of sound in, 585–587
 incompressible fluid, adiabatic, one-dimensional, steady-state flow of, 583–584
 isentropic nozzle, mass-flow rate of ideal gas, 590–595
 nozzle and diffuser coefficients, 601–603
 nozzle, normal shock in ideal gas, 595–601
 stagnation properties, 578–580
- Compression ratio, 335
 Dual cycle, 340
- Compressor efficiency, 281
- Compressor, steady-state process, 146–148
- Condenser losses, 390
- Conduction, 199
- Conservation of energy, 71
- Conservation of mass, 134–137
- Constant enthalpy, 145
- Constant-pressure heating value, 517
- Constant-pressure process, 38, 221
- Constant-pressure specific heats, 100–102
 solids and liquids, 101–102
- Constant-temperature energy reservoirs, 197–199
- Constant-volume heating value, 517
- Constant-volume heats, 100–102
 solids and liquids, 101–102
- Continuity equation, 108, 135, 148, 152–155
- Control mass, 4, 94, 235–236
- Control mass process, 302–304
- Control surface, 134
- Control volume, 382
 conservation of mass and, 134–137
 energy conservation and device efficiency, 277–283
 energy equation for, 137–139
 entropy balance equation for, 260–261
 engineering applications, 159–164, 277–283
 momentum equation for, 580–582
 multiple-flow devices, 152–154
 principle, increase of, 273–277
 with several different subsystems, 73
 steady-state single-flow process, 269–273
 thermodynamic system and, 4–5
 transient flow process, 154–159
 transient process, 262–269
- Control-volume equations, 140
- Convection, 199
- Convective heat transfer, 89
- Convergent-divergent nozzle, 592, 598–599
- Convergent nozzle, 593
- Converging-diverging nozzle, 594–595
- Conversion, energy, 113–114
- Conversion factors, 612–614
- Coolers, control volume, 160
- Cooling effect of adiabatic saturation process, 439
- Coordinate system, for diatomic molecule, 21
- Critical constants, 615
- Critical-density ratio, 590

- Critical pressure, 38
 Critical-pressure ratio, 590
 Critical temperature, 38
 Critical-temperature ratio, 590
 Critical volume, 38
 Cryogenic fluids, 99
 Cubic equations, 60, 470
 Cubic equation of state, 683
 Cut-off ratio, Dual cycle, 340
 Cyclic heat engine, 204
 Cyclic machine, 74
 Cylinder pressure, 84
 Cylinder system, 14–15, 18–19
- D**
 Dalton model of gas mixtures, 420–425
 Dead state, 307
 Dehumidifier schematic, 439
 Density, 10–13
 Desuperheater, 162
 Device efficiency, entropy analysis, 277–283
 Diatomic molecule, coordinate system for, 21
 Diatomic polyatomic gases, 681–682
 Dichlorodifluoromethane (CCl_2F_2), 396
 Diesel cycle, 336–339
 Diesel engine, aftercooler for, 160
 Diffusers:
 control volume, 159–160
 steady-state process, 145
 Diffuser coefficients, nozzle and, 601–603
 District heating, 392
 Dry-bulb temperatures, 434–440
 Dry saturated vapor, 37
 Dual cycle, 339–340
 Dual fluid heat exchanger, 142
- E**
 Electrical systems, 116
 Electricity, 113
 Electromotive force (EMF), 529–532
 Energy, 20–22, 246
 Energy analysis, of reacting systems, 512–516
 Energy conservation, entropy analysis, 277–283
 Energy consumption, 112
 Energy conversion, 113–114
 Energy conversion devices, 178
 Energy equation, 70–73, 215
 constant-volume and constant-pressure
 specific heats, 100–102
 for control volume, 137–139
 definition of work, 75–79
 engineering applications, 111–118
 enthalpy, thermodynamic property, 98–100
 gas-vapor mixtures, 430–432
 heat, definition of, 88
 heat transfer modes, 89–93
 internal energy, enthalpy and specific heat of
 ideal gases, 102–108
 problem analysis and solution technique, 93–97
 simple compressible system, 80–87
 transient heat transfer process, 109–111
 Energy resources, 111–113
 Energy storage, 114–116
 Energy transfer, 116–118, 135
 Energy transformation, 113–114
 Engineering applications:
 chemical reactions, 533–536
 energy conversion and transformation, 113–114
 energy resources, 111–113
 energy storage, 114–116
 energy transfer, 116–118
 entropy analysis, 277–283
 exergy, 316–317
 gas mixtures, 434–440
 phase and chemical equilibrium, 570–572
 pure substance, 61–63
 second law of thermodynamics, 204–206
 thermodynamic relations, 488–491
 thermodynamics, 24–28
 English Engineering System of Units, 9, 10, 23
 Enthalpy:
 at constant temperature, 472–475
 energy equation, 102–108
 and internal energy of combustion, 516–521
 thermodynamic property, 98–100
 thermodynamic relations, 458–464
 Enthalpy–entropy diagram for steam, 218
 Enthalpy of formation, 629
 chemical reactions, 509–511
 Entropy:
 and chaos, 246–248
 control mass during irreversible process, change of, 235–236
 energy conservation and device efficiency, 277–283
 engineering applications, 277–283
 entropy balance equation, for control volume, 260–261
 entropy balance equation, rate form, 242–246
 entropy generation and entropy equation, 236–238
 ideal gas, change of, 226–231
 principle, increase of, 238–241, 273–277
 property of system, 215–217
 of pure substance, 217–219
 reversible polytropic process, for ideal gas, 231–234
 reversible processes, change in, 219–224
 solid or liquid, change of, 225–226

- J**
 Jet engine, ideal gas-turbine cycle for, 358
 Jet pump, 161
 Joule (*J*), 76
- K**
 Kalina cycle, 407
 Kay's rule, 485
 Kelvin-Planck statement, 182-185
 Kilogram (kg), 9
 Kinetic energy of the control mass, 76-78
- L**
 Large axial-flow gas turbine compressor rotor, 161
 Large butterfly valve, 160
 Large wind turbine, 162
 Lee-Kesler equation, 61, 471-473, 476, 489, 684
 Lee-Kesler simple fluid, 684, 685
 Lewis-Randal rule, 482
 Linde-Hampson system, for liquefaction of gases, 400
 Linear polyatomic gases, 681-682
 Liquefaction of gases, Linde-Hampson system for, 400
 Liquefied natural gas (LNG), 62
 Liquid:
 constant-volume and constant-pressure
 specific heats, 101-102
 entropy change, 225-226
 properties of, 616
 Liquid crude oil, 501
 Liquid hydrocarbon fuels, 500, 501
 Liquid hydrogen, 501
 Liquid metal-water binary power system, 406
 Liquid octane, 522-523
 Liquid oxygen plant, 400
 Liquid propane-gaseous water, 520
 Liquid propane-liquid water, 519
 Liquid pumps, 161
 Liquid states, 49-50
 Liquid-vapor surface, 42, 43
 Liquid water, submerged in, 55
 Lost work, 299
 Lower heating value (LHV), 518
 Low-pressure ammonia vapor, 401
 Low-pressure region, of compressibility chart, 468
 Low-temperature fuel cells, 531
- M**
 Macroscale, 20
 Macroscopic point of view, 5-6
 Manual oil pump, 161
 Mass and energy transfers, 297
 Mass, conservation of, 134-137
 Mass-flow rate, 54, 136, 139
 of ideal gas, isentropic nozzle, 590-595
 Maxwell relations, 455-458
 Mean solar day, 8
 Mean temperature of heat addition, 378
 Mechanical systems, 115
 Mercury barometer, 17
 Mercury (Hg) manometer, 17
 Metastable equilibrium, 551-552
 Methane, 505, 508
 Micro, 8
 Microscopic points of view, 5-6
 Miller cycles, 341-344
 Milli, 8
 Mixing chamber, 162
 Mixture:
 property relation for, 478-482
 of two gases, 420
 Mole-basis analysis, of gaseous mixture
 yields, 419
 Mollier diagram, 217
 Momentum equation, for control volume, 580-582
 Monatomic gases, 681
 Multiflow devices, control volume, 162, 163
 Multiple-flow devices, 152-154
- N**
 Nano, 8
 Naphthalene, 500
 Natural gas furnace, 152
 Newton's second law of motion, 8, 10
 Nitrogen, 56
 compressibility of, 57
 NJFB, 38
 Nonequilibrium process, 84
 Nonlinear polyatomic molecules, 682
 No phase, 101
 Nozzle:
 adiabatic, one-dimensional, steady-state flow,
 incompressible fluid, 583-584
 control volume, 159-160
 and diffuser coefficients, 601-603
 normal shock in ideal gas, 595-601
 reversible, adiabatic, one-dimensional flow,
 ideal gas, 587-590
 steady-state process, 144-145
 Nozzle pressure ratio, 592

O

Ocean exploration, research submarine for, 18
 One-dimensional flow, 583–584
 One-dimensional isentropic compressible-flow functions, 609, 610
 One-dimensional normal shock, 595
 Open cycle, 325
 Organic Rankine Cycles (ORC), 392
 Otto cycle, 325, 333–336
 Oxy-combustion, 533
 Oxygen, pressure-enthalpy diagram for, 691

P

Partial derivatives, 454, 455
 Pascal (Pa), 13, 14, 16
 Passive devices, control volume, 159–160
 Path function, 81
 Percent theoretical air, 505
 Perpetual motion machines, 204
 Petroleum distillation column, 502
 Phase boundaries, 36–42
 Phase equilibrium:
 coal gasification, 567–568
 engineering applications, 570–572
 equilibrium, requirements for, 545–547
 ionization, 568–570
 metastable equilibrium, 551–552
 pure substance, two phases of, 547–551
 simultaneous reactions, 563–567
 Pico, 8
 Pinch point, 412
 Pipeline gate valve, 160
 Piping losses, 389
 Piston cylinder, 73
 Piston/cylinder-type compressor, 147
 Point functions, 81
 Polyatomic molecules, 21
 Polymer electrolyte cell (PEC), 532
 Polytropic process, 231, 232
 simple compressible system, 85–87
 Pound, 10
 Power-generating devices, 2
 Power plant, steady-state process, 149–152
 Power systems, 325–327
 air-standard cycle for jet propulsion, 356–359
 air-standard power cycles, 327–328
 Atkinson and Miller cycles, 341–344
 Brayton cycle, 344–350
 Diesel cycle, 336–339
 Dual cycle, 339–340
 gas-turbine power cycle configurations, 352–356

 Otto cycle, 333–336
 reciprocating engine power cycles, 331–333
 simple gas-turbine cycle with regenerator, 350–352
 Stirling cycle and Ericsson cycle, 328–331
 Pressure, 13–19, 24
 Pressure–enthalpy diagram:
 for ammonia, 690
 for oxygen, 691
 Pressure ratio, 350
 Pressure relief valve, schematic of, 26
 Problem analysis and solution technique, 93–97
 Products, 503
 Propane, 59, 519–521
 Property relation for mixtures, 478–482
 Pseudopure substance models, for real gas mixtures, 482–487
 Psychrometer, 434
 Psychrometric chart, 434–440, 692
 P – T diagram, 40
 Pump, steady-state process, 146–148
 Pump losses, 389
 Pure substance, 35–36
 compressibility factor, 56–60
 engineering applications, 61–63
 entropy of, 217–219
 equations of state, 60–61
 ideal gas states, 53–56
 liquid and solid states, 49–50
 phase boundaries, 36–42
 P – v – T surface, 42–45
 superheated vapor states, 50–53
 thermodynamic properties, tables of, 45–47
 two phases of, 547–551
 two-phase states, 47–48
 P – v diagram, 80
 polytropic process on, 232
 reversible and irreversible processes on, 238
 transient flow process, 158
 P – v – T behavior:
 pseudopure substance models for real gas mixtures, 482–487
 real-gas behavior and equations of state, 467
 P – v – T surface, 42–45

Q

Quasi-equilibrium process, 80–83

R

R-134a, 142, 143, 179, 398
 Radiation, 199
 Railroad tracks, 62
 Rankine cycle, 375–378, 407

- pressure and temperature on, 37–38, 1
