*Abstract*

This descriptive research study aimed at determining the jobs offered by the different Manning Agencies. The participants of this study were the ten (10) different Manning Agencies located here in Iloilo chosen through Convenience Sampling. Distribution of a questionnaire-checklist was imposed to gather necessary information needed for the completion of this study. Descriptive statistics employed were frequency count, percentage, and rank. Out of the ten (10) Manning Agencies that we targeted to be our respondents, and we have given questionnaire about our study, only eight (8) have been successfully retrieved. With the corresponding numbers of agencies, a lot of services are offered. One of the most in-demand jobs offered is for the Domestic Helpers. Next is on Medical related services such as Nurses and Caregiver. With the jobs that were listed, we are now assured that there is still a chance to work abroad in the future.
