

Production and Operations Management Basics

Printable Workbook included in the DVD

TABLE OF CONTENTS

1. Introduction to Production and Operation Management	2.3 Production System Model	44
1.1 Historical Evolution of Production and Operations Management	2.3.1 Meaning of Production System	45
1.2 Concept of Production	2.3.2 Classification of Production System	46
1.2.1 Classification of Production System	2.4 Characteristics of Production Systems	51
1.3 Nature and Scope of Operations Management	2.4.1 Scope of Production Management	53
1.3.1 Importance of Production Planning and Control	2.5 Factors Influencing Manufacturing System	55
1.4 Objectives of Operations Management	2.6 Production System Design	58
1.5 Manufacturing Systems and Layouts	2.6.1 Importance of Production Planning and Control	59
1.6 Significance and Systematic View of Operations	3. Materials Management / Inventory Control	
1.6.1 Systematic View of Operations	3.1 Concepts of Materials Management	66
1.6.2 Significance of Operation Management	3.1.1 Materials Planning and Control	67
1.7 Factors of Production	3.1.2 Inventory Control	68
1.7.1 Objectives of Production and Operation Management	3.1.3 Scope of Materials Management	68
1.7.2 Element of Production and Operation Management	3.1.4 Advantages of Integrated Materials Management	71
1.8 Operations Management as Multidisciplinary Subject	3.2 Integrated Waste Management	72
2. Production System	3.2.1 Benefits of Integrated Waste Management	73
2.1 Typology of Products	3.2.2 Comprehensive Waste Stream Analysis	74
2.2 Product Life Cycle	3.2.3 Extended Producer Responsibility Policies	75
2.2.1 The Four Stages of the Product Life Cycle	3.2.4 Selection of Suppliers	76

3.3	Inventory Control or Management.....	80	4.	Work Measurement	
3.3.1	Reasons for Keeping Inventories.....	80	4.1	Work Measurement Techniques.....	121
3.3.2	Meaning of Inventory Control.....	82	4.1.1	Stop Watch Time Study	122
3.3.3	Objectives of Inventory Control.....	82	4.1.2	Synthesis.....	124
3.3.4	Benefits of Inventory Control.....	82	4.1.3	Predetermined Motion Time System (PMTS)	124
3.3.5	Techniques of Inventory Control.....	83	4.1.4	Analytical Estimating.....	125
3.3.6	Inventory Model.....	85	4.2	Time Study.....	126
3.3.7	Purchasing Systems.....	86	4.2.1	The Worker Factor.....	127
3.4	Ergonomics (Human Engineering).....	89	4.2.2	Allowances and Time Standard.....	128
3.4.1	Objectives of Human Engineering.....	90	4.2.3	Time Study Equipment	128
3.4.2	Store Management.....	91	4.2.4	Normal Performance and Rating	130
3.4.3	Codification.....	91	4.2.5	Issues with Time Study.....	134
3.5	Value Analysis.....	93	4.3	Work Sampling	135
3.5.1	Value Analysis Framework	93	4.3.1	Sampling Procedure.....	136
3.5.2	Steps in Value Analysis	94	4.3.2	Activity Sampling.....	138
3.6	Inventory Management System.....	95	4.3.3	Standard Time Determination	139
3.6.1	Objectives.....	96	4.3.4	Sampling and Confidence Intervals.....	140
3.6.2	Functions.....	97	4.3.5	Random Observations.....	140
3.6.3	Nature of Inventory Management System.....	98	5.	Production Planning and Supply Chain Management	
3.6.4	Importance of Inventory Management System.....	98	5.1	Strategy Analysis	
3.6.5	Purposes of Inventory	100	5.1.1	Setting Strategic Direction.....	148
3.7	Inventory Costs.....	102	5.1.2	Action Plan to Improve Productivity.....	150
3.7.1	Inventory Classification System.....	104	5.1.3	Situation Analysis.....	151
3.8	ABC Analysis	104	5.2	Aggregate Planning.....	152
3.8.1	Advantages of ABC Analysis	106	5.2.1	Aggregate Planning Strategies.....	155
3.8.2	EOQ Models	107	5.2.2	Factors Affecting Aggregate Planning.....	155
3.8.3	Economic Production Quantity Model.....	109	5.2.3	Aggregate planning as an Operational Tool.....	156

5.2.4	Importance of Aggregate Planning.....	157	5.7.5	IT Service are Stretched, but Operations Performance Goals are as important as Ever	195
5.3	Strategic, Tactical, and Capacity Planning.....	157	5.7.6	Supply Chain Management Tools Meet Software as a Service.....	196
5.3.1	Difference between Aggregate Planning in Manufacturing and Aggregate Planning in Services	160	5.7.7	on-demand Service Providers Optimize Value from the Data Center	196
5.3.2	Capacity Planning	162	5.7.8	High Value Solutions Combined with Improvement Driven Services Drive Real Value.....	197
5.3.3	Long-term and Short-term Capacity Planning	164	5.8	Steps to Optimizing Supply Chain Management	198
5.3.4	Capacity-Planning Techniques.....	166	6.	Forecasting Techniques	
5.4	Supply Chain Management: Concepts and Need.....	167	6.1	Forecasting in Operations	204
5.4.1	Benefits of Supply Chain Management	171	6.1.1	Characterizing Demand.....	205
5.4.2	Elements of SCM.....	173	6.1.2	Purpose of Forecasting Demand	206
5.5	Logistics.....	181	6.1.3	Extrapolation Techniques of Demand Forecasting.....	207
5.5.1	Main Logistics Targets.....	182	6.2	Qualitative Methods.....	208
5.5.2	Logistics Viewpoints.....	182	6.3	Quantitative Methods Forecast	212
5.5.3	Logistics Fields.....	182	6.4	Time Series and Seasonal Indices..	216
5.5.4	Logistics Outsourcing.....	183	6.4.1	Measuring Linear Secular Trends.....	218
5.6	Electronic Data Interchange (EDI) and E-Commerce	185	6.4.2	Measuring Nonlinear Secular Trends	223
5.6.1	E-Commerce.....	187	6.4.3	Seasonal Indexes.....	225
5.7	Requirements for Supply Chain Management	190	7.	Facility Planning and Layout	
5.7.1	Challenge of Managing Global Supply Chains.....	192	7.1	Facility Plan	234
5.7.2	Outsourcing Creates Supply Chain Visibility Challenges...	192	7.1.1	Master Plan	234
5.7.3	Going beyond Supply Chain Visibility to Rapid Response	193	7.1.2	Strategic Facility Plan	235
5.7.4	High Value Solutions for Supply Chain Management	194	7.2	Objectives of Facility Planning	236
			7.3	Facilities Planning Process.....	237
			7.4	Facility Layouts	241

7.4.1	Types of Layouts	243	7.5.2	Differences between Office and Factory Layouts	251
7.5	Designing/Preparing Facility Layout	248	7.6	Computerized Relative Allocation of Facilities Technique (CRAFT)	252
7.5.1	Factors in Determining Layout and Design	249	7.6.1	Distinguishing features of CRAFT	253
